- 3.92% Asia ex Japan
- 3.66% Japan
- 33.99% Rest of World

INVESTMENT OBJECTIVE

The aim of the model is to increase in value, over a minimum of 5 years, by investing in a range of asset classes and global markets. This will be achieved through a combination of capital growth, which is profit on investments held, and income, which is money paid out of investments such as dividends from shares and interest from bonds.

INVESTMENT POLICY

The model will be actively managed, on a low medium risk strategy. It will aim to maintain an internal risk rating classification of 5. The risk rating range is from 1 (lowest risk) to 10 (highest risk). This range is utilised across the whole of our investment proposition. The model will invest in a number of different asset classes across global markets, including shares in companies, bonds, property and commodities.

For Use By Professional Intermediaries Only.

FACTSHEET
May 2024

ABOUT KING FINANCIAL PLANNING

James King has been successfully advising clients for over 25 years. King Financial Planning's aim is simple: to provide independent and professional advice at a fair cost. King Model Portfolios are appropriate for a wide range of investors, including private clients, pensions, trusts, companies and charities.

KING MODEL PORTFOLIOS

The King Model Portfolios consist of index-tracking investments, providing low-cost exposure to a comprehensive range of assets and markets. The portfolios target specific levels of volatility and are matched to a client's attitude to risk. This approach aims to reduce costs and outperform the model portfolio benchmark. Clients will benefit from a competitive, transparent charging structure, on-going active portfolio management and online access to their portfolios 24 hours a day.

INVESTMENT PHILOSOPHY

The fund management industry has experienced significant change in the last quarter of a century. Product innovation has enabled investors to benefit from wider exposure to global financial markets with far greater efficiency and at a lower cost. Index-tracking investments such as Exchange Traded Funds (ETF) have grown increasingly important. We believe an actively managed, globally allocated, multi-asset portfolio, comprised of low-cost ETFs with diversified holdings in equity, bond, commodity and property markets is statistically more likely to outperform a traditional "stock picking" manager most of the time.

INVESTMENT STRATEGY

The King Model Portfolios are medium to long term investments (5 years or more) and are not suitable for money which might be needed in the short term.

INVESTMENT TEAM

The Tavistock Investment Committee carries direct responsibility for all discretionary investments at the firm. The principal focus of the committee is to monitor the performance of each investment solution within the Centralised Investment Proposition (CIP) against its stated investment objectives, target market and long-term return objective versus its peer group.

ABOUT TAVISTOCK

Tavistock is authorised and regulated by the Financial Conduct Authority to provide Discretionary Fund Management (FRN: 210782). Tavistock is responsible for over £1bn of assets on behalf of all clients, aiming to provide private clients with access to institutional quality portfolio management at a retail price.Tavistock's model portfolios provide individual investors with the benefit of collective buying power to ensure that the charges they incur for model portfolio management, platform fees and dealing are amongst the lowest in the industry. Currently, Tavistock has over 175 financial advisers helping 50,000+ private clients look after more than £3.5bn of investments.

PEER GROUP

Although the PROFILE is not benchmarked against the IA sector one may wish to compare the performance of King Model Portfolio 5 to the IA Mixed Investment 20-60% Shares sector for peer group analysis.

FACTSHEET
May 2024

MANAGER COMMENTARY

It was a good month for equities as developed markets delivered returns of 4.53%. In the US, strong earnings propped up the S&P 500, which rose by 4.96%. Elsewhere in developed markets, Europe and the UK delivered moderate returns as economic data reinforced a positive economic outlook. The Euro Stoxx 50 rose by 2.42%, and the FTSE 100 rose by 2.03%. Japanese equities lagged their developed market peers, with the TOPIX up just 1.07%, as low currency levels undermined consumer sentiment. Emerging markets delivered subdued returns and rose just 0.59%. Bond markets delivered positive returns for the month, supported by the continued anticipation of summer rate cuts. Investors expect monetary policy between regions to diverge, with the European Central Bank and the Bank of England expected to cut before the US. The US Treasury yield fell by 18 bps to 4.50%, and the 10-year Gilt yield fell slightly by 2 bps to 4.31%. The Bloomberg Global Aggregate Index rose 0.86%, and the Bloomberg Global High Yield Index rose by 1.20%. Commodities continued their strong performance, with the Bloomberg Commodity Index up 1.76%. Precious metals delivered good returns as silver prices rose by 15.65% and gold prices rose by 1.80%. Oil prices detracted from broad-based commodity performance, falling by 7.10% (Brent) for the month of May.
