- 18.32% Rest of World

INVESTMENT OBJECTIVE

The aim of the model is to increase in value, over a minimum of 5 years, by investing in a range of asset classes and global markets. This will be achieved through a combination of capital growth, which is profit on investments held, and income, which is money paid out of investments such as dividends from shares and interest from bonds.

INVESTMENT POLICY

The model will be actively managed, on a high risk strategy. It will aim to maintain an internal risk rating classification of 8. The risk rating range is from 1 (lowest risk) to 10 (highest risk). This range is utilised across the whole of our investment proposition.

ABOUT KING FINANCIAL PLANNING

James King has been successfully advising clients for over 25 years. King Financial Planning's aim is simple: to provide independent and professional advice at a fair cost. King Model Portfolios are appropriate for a wide range of investors, including private clients, pensions, trusts, companies and charities.

KING MODEL PORTFOLIOS

The King Model Portfolios consist of index-tracking investments, providing low-cost exposure to a comprehensive range of assets and markets. The portfolios target specific levels of volatility and are matched to a client's attitude to risk. This approach aims to reduce costs and outperform the model portfolio benchmark. Clients will benefit from a competitive, transparent charging structure, on-going active portfolio management and online access to their portfolios 24 hours a day.

INVESTMENT PHILOSOPHY

The fund management industry has experienced significant change in the last quarter of a century. Product innovation has enabled investors to benefit from wider exposure to global financial markets with far greater efficiency and at a lower cost. Index-tracking investments such as Exchange Traded Funds (ETF) have grown increasingly important. We believe an actively managed, globally allocated, multi-asset portfolio, comprised of low-cost ETFs with diversified holdings in equity, bond, commodity and property markets is statistically more likely to outperform a traditional "stock picking" manager most of the time.

INVESTMENT STRATEGY

The King Model Portfolios are medium to long term investments (5 years or more) and are not suitable for money which might be needed in the short term.

INVESTMENT TEAM

The Tavistock Investment Committee carries direct responsibility for all discretionary investments at the firm. The principal focus of the committee is to monitor the performance of each investment solution within the Centralised Investment Proposition (CIP) against its stated investment objectives, target market and long-term return objective versus its peer group.

ABOUT TAVISTOCK

Tavistock is authorised and regulated by the Financial Conduct Authority to provide Discretionary Fund Management (FRN: 210782). Tavistock is responsible for over £1bn of assets on behalf of all clients, aiming to provide private clients with access to institutional quality portfolio management at a retail price.Tavistock's model portfolios provide individual investors with the benefit of collective buying power to ensure that the charges they incur for model portfolio management, platform fees and dealing are amongst the lowest in the industry. Currently, Tavistock has over 175 financial advisers helping 50,000+ private clients look after more than £3.5bn of investments.

PEER GROUP

Although the PROFILE is not benchmarked against the IA sector one may wish to compare the performance of King Equity Growth to the IA Flexible Investment sector for peer group analysis.

FACTSHEET
August 2024

MANAGER COMMENTARY

August proved turbulent for investors. Early disappointment in US economic data, along with a rate hike by the Bank of Japan, caused a global equities selloff. However, markets recovered by the end of the month as expectations for Federal Reserve policy easing increased. The US ISM manufacturing index that was published in July dropped to 46.8, below the predicted 48.8. The July jobs data showed only 144,000 new jobs, the smallest gain in three years, while unemployment climbed to 4.3%. As a result, this stoked concerns over slowing growth. Despite these initial fears, the S&P 500 recovered from a 6.1% plunge in the first three trading days, closing 2.43% higher for the month. Japanese equities sold off sharply with the Nikkei 225 falling 20% before maintaining a comeback, finishing 1.09% lower than July. This was due to the Bank of Japan's 0.25% interest rate hike, and Governor Ueda's hawkish tone contributing to the unwinding of the Yen carry trade. The yen rebounded from a 38-year low to its highest level since the beginning of the year, the worst since the October 1987 crisis. Interest rates repriced expecting more rate cuts which saw bonds rally with a 2.37% gain in the Bloomberg global aggregate by the end of the month. Commodities slightly underperformed for the month with the Goldman Sachs commodity index falling by 2.66%. Oil prices fell, while iron ore reached a two-year low as a result of China's real estate crisis.
