- 9.59% Europe ex UK
- 1.58% Asia ex Japan
- 2.37% Japan
- 54.06% Rest of World

INVESTMENT OBJECTIVE

The aim of the model is to increase in value, over a minimum of 5 years, by investing in a range of asset classes and global markets. This will be achieved through a combination of capital growth, which is profit on investments held, and income, which is money paid out of investments such as dividends from shares and interest from bonds.

INVESTMENT POLICY

The model will be actively managed, on a low risk strategy. It will aim to maintain an internal risk rating classification of 3. The risk rating range is from 1 (lowest risk) to 10 (highest risk). This range is utilised across the whole of our investment proposition. The model will invest in a number of different asset classes across global markets, including shares in companies, bonds, property and commodities.

For Use By Professional Intermediaries Only.

FACTSHEET
September 2024

ABOUT KING FINANCIAL PLANNING

James King has been successfully advising clients for over 25 years. King Financial Planning's aim is simple: to provide independent and professional advice at a fair cost. King Model Portfolios are appropriate for a wide range of investors, including private clients, pensions, trusts, companies and charities.

KING MODEL PORTFOLIOS

The King Model Portfolios consist of index-tracking investments, providing low-cost exposure to a comprehensive range of assets and markets. The portfolios target specific levels of volatility and are matched to a client's attitude to risk. This approach aims to reduce costs and outperform the model portfolio benchmark. Clients will benefit from a competitive, transparent charging structure, on-going active portfolio management and online access to their portfolios 24 hours a day.

INVESTMENT PHILOSOPHY

The fund management industry has experienced significant change in the last quarter of a century. Product innovation has enabled investors to benefit from wider exposure to global financial markets with far greater efficiency and at a lower cost. Index-tracking investments such as Exchange Traded Funds (ETF) have grown increasingly important. We believe an actively managed, globally allocated, multi-asset portfolio, comprised of low-cost ETFs with diversified holdings in equity, bond, commodity and property markets is statistically more likely to outperform a traditional "stock picking" manager most of the time.

INVESTMENT STRATEGY

The King Model Portfolios are medium to long term investments (5 years or more) and are not suitable for money which might be needed in the short term.

INVESTMENT TEAM

The Tavistock Investment Committee carries direct responsibility for all discretionary investments at the firm. The principal focus of the committee is to monitor the performance of each investment solution within the Centralised Investment Proposition (CIP) against its stated investment objectives, target market and long-term return objective versus its peer group.

ABOUT TAVISTOCK

Tavistock is authorised and regulated by the Financial Conduct Authority to provide Discretionary Fund Management (FRN: 210782). Tavistock is responsible for over £1bn of assets on behalf of all clients, aiming to provide private clients with access to institutional quality portfolio management at a retail price.Tavistock's model portfolios provide individual investors with the benefit of collective buying power to ensure that the charges they incur for model portfolio management, platform fees and dealing are amongst the lowest in the industry. Currently, Tavistock has over 175 financial advisers helping 50,000+ private clients look after more than £3.5bn of investments.

PEER GROUP

Although the PROFILE is not benchmarked against the IA sector one may wish to compare the performance of King Model Portfolio 3 to the IA Mixed Investment 0-35% Shares sector for peer group analysis.

FACTSHEET
September 2024

MANAGER COMMENTARY

US equities saw a volatile start to the month with the S&P 500 down -4.22% in the first week. However, the S&P 500 went on to reach an all-time high, closing 2.14% up for the month after the Federal Reserve began its rate cutting cycle. Elsewhere in developed markets, the STOXX 600 also experienced volatility after China stimulus boosted luxuries and miners, recouping some of the bad performance recorded in the first week of September but still ending down -0.32%. The UK underperformed, with the FTSE All-Share falling -1.29%. Japanese markets performed poorly, with the Nikkei 225 down -1.30%. Following the stimulus package announced by China's central bank, Chinese stocks soared with the Shanghai SE Composite Index up 17.61%. Bond markets delivered positive returns for the month, supported by the Fed easing monetary policy for the first time in four years. The US 10-year Treasury yield fell for the 5th consecutive month by 12 bps to 3.78, and the 10-year Gilt yield saw little change, falling by 5 bps to 4.0% after the BoE held rates at 5%. The Bloomberg Global Aggregate Index rose 1.70%, and the Bloomberg Global High Yield Index rose by 1.95%. Commodities showed strong performance for the month, with the Bloomberg Commodity Index up 4.43%. While oil (Brent) prices continue to negatively impact broad-based commodity performance, gold and silver showed strong performance, with gold up 5.24% and silver up 7.95%.
